

Cadaver Lab Streaming

1. Make sure the cadaver lab is in use and prepared for instruction. The Stryker camera will need to be turned on using the panel in the cadaver lab HSMP 226.

NOTE: Any time the cadaver lab camera is turned on, the live stream will be viewable. If you do not want the stream to be visible, turn off the camera.

2. The viewer will need to open a Real Time Streaming Protocol (rtsp) program. At UCCS we recommend [VLC](#) as it is free to use and installed on all our classroom computers.
3. Click on the **Media** dropdown menu and select **Open Network Stream...**

4. Enter the **network URL** you would like to stream and click **Play**. For the Cadaver Lab feed, the URL is <rtsp://128.198.89.13:8554/CadaverLab>
