

How to Install Casper for macOS

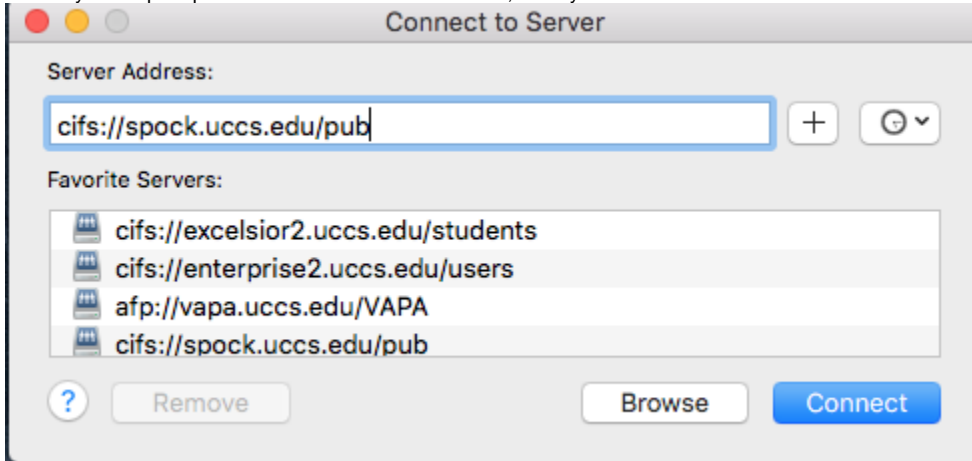

- [Step 1: Access Spock](#)
- [Step 2: Choose Casper](#)
- [Step 3: Drag the package](#)
- [Step 4: Begin the Installation](#)
- [Step 5: After the Installation](#)

Step 1: Access Spock

Access //spock/pub by clicking on the desktop and choosing **Go** and then **Connect to Server** from the menu at the top of your screen. Type in the address **cifs://spock.uccs.edu/pub**

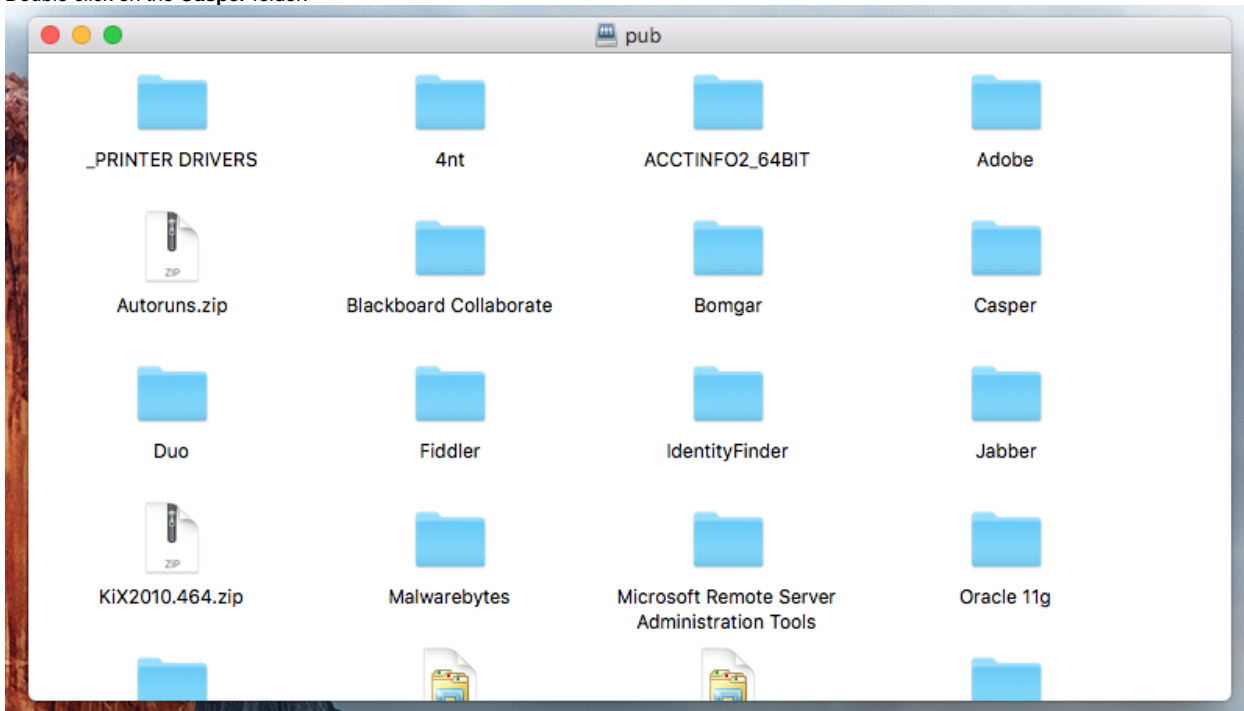

Note: Connection to this server requires you to be on campus or connected to the [VPN](#).

Note: If you are prompted for a Username and Password, enter your UCCS credentials.

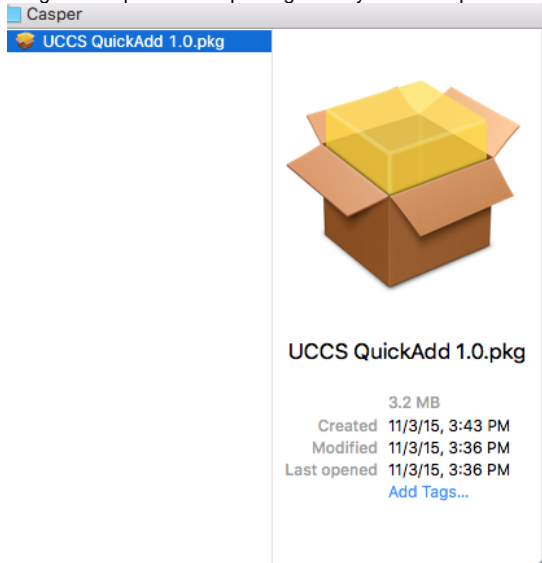

Step 2: Choose Casper

Double click on the **Casper** folder.

Step 3: Drag the package

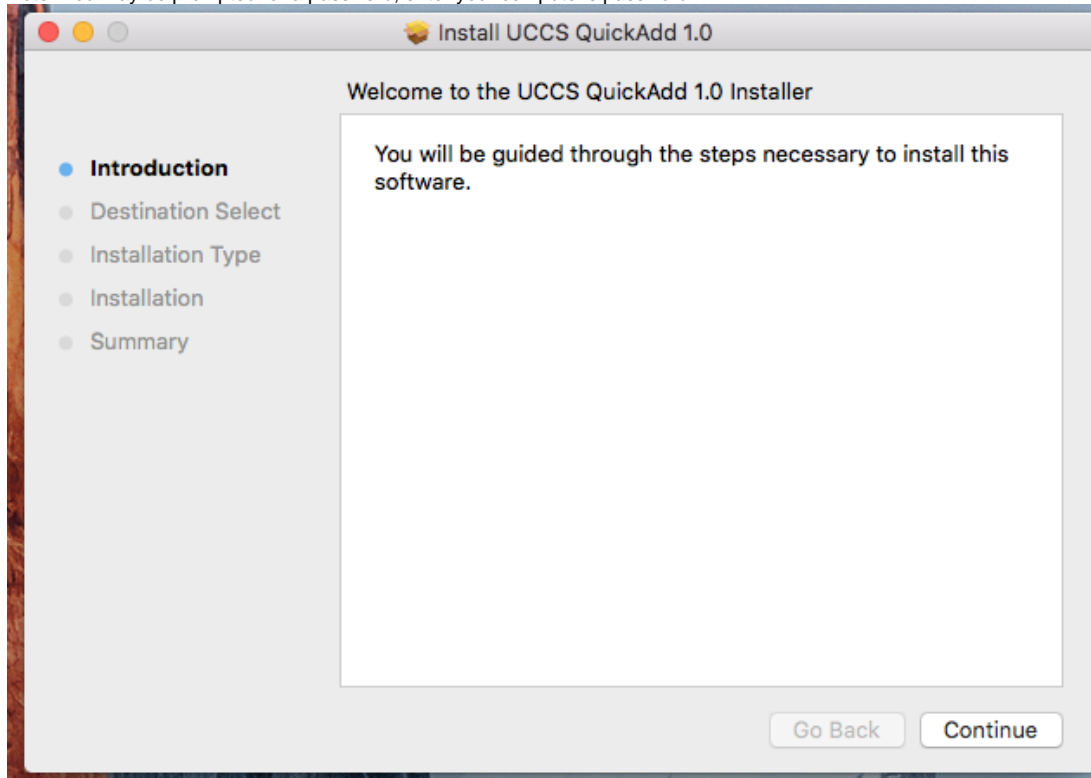

Drag and drop the install package onto your desktop. The install package will be called UCCS QuickAdd x.x.pkg.

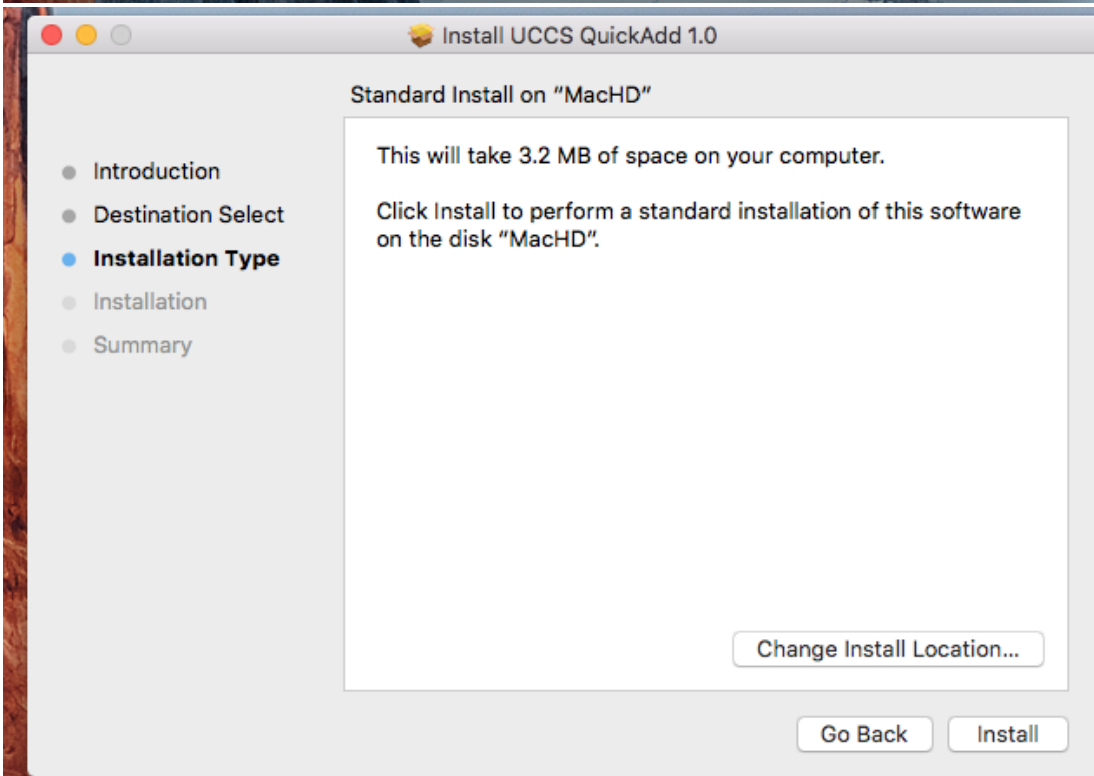

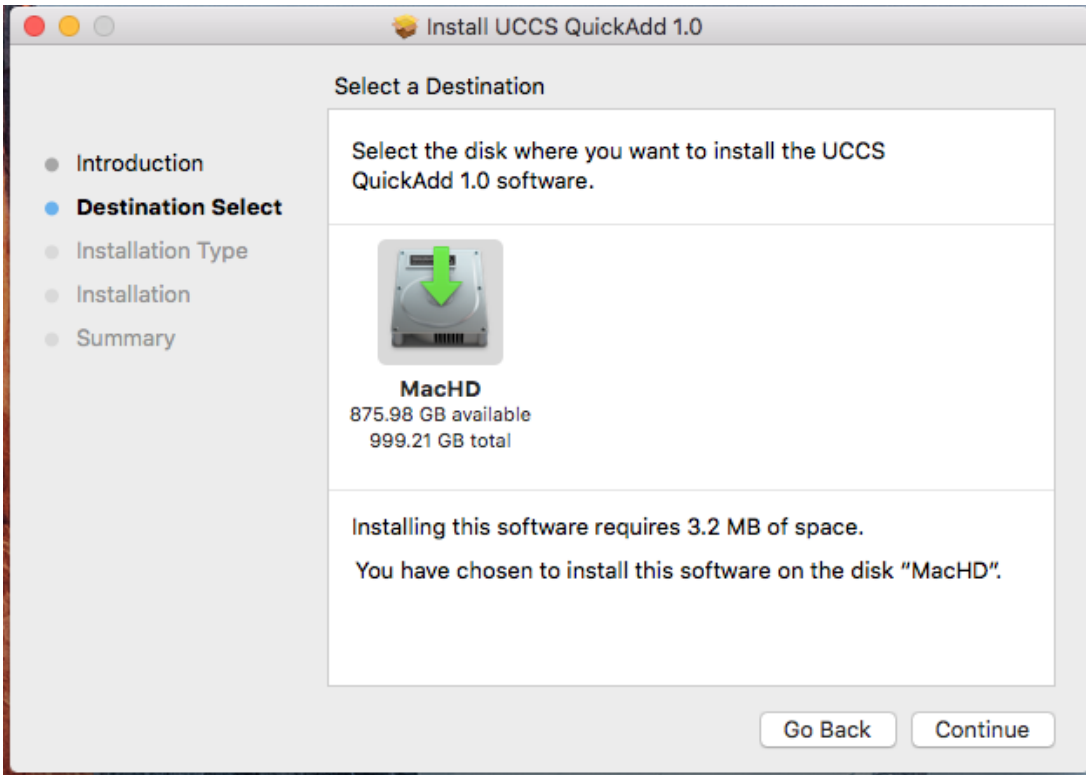

Step 4: Begin the Installation

Start running the installer. Accept all default settings and press Continue.

Note: You may be prompted for a password, enter your computer's password.

Step 5: After the Installation

For information and usage of Casper, please visit the following link: [Casper Self Service](#).
